

Articulated taping machine

for automatic production line

● Mechanical engineering

● Realizations

○ Cabling

○ Machines

This taping machine is installed on a coil production line and **allows the application of an adhesive tape** at the end of the reel.

The pneumatic movement allows the blanket roller to be applied against the product to be taped, with a **high effort due to the toggle effect** created by the mechanism.

A **pneumatically driven blade** cuts the tape at the end of the operation.

The diversions roller arrangement allows a **homogeneous unwinding and makes the process more reliable**.

Roll replenishment is facilitated by the design and layout of the various elements

SPECIFICATIONS :

- Large diameter adhesive tape (Ø270mm)
- For coils from Ø100 to Ø300mm
- 3 pneumatic movements
- Quick clamping for adjusting the position of the sub-assembly on the support beam

Reference : 3590

Project added the 31/03/21
