

## **Clipping station**

## Slides on bottom plate

Assembly station upstream of the heated drawer assembly line, allowing 2 slides to be **clipped** onto a base plate.

It **communicates** with the line in order to validate and guarantee the correct assembly for the rest of the operations.

**Ergonomic** workstation, electrically adjustable in height, with security of the work area by "U" shaped light curtains (facilitates the operator's lateral movements).

Possibility of assembling **2 sheet metal formats** (60cm and 30 inches). The change of series is done in less than 30s and **without tools**.

Control of the correct clipping by detection and **vision sensor**.

A mechanical device **locks** the position of the slides once the check has been carried out.

## SPECIFICATIONS:

Height adjustment 300mmSheet sizes: 60cm / 30 inches

• Height 2000mm / Width 1025 / Depth: 800mm

Pneumatic energy: 5 barsElectrical energy: 230V

Reference: 3472
